mixing inquiry #82

"Our polymer dissolving process takes many hours to complete each batch. Can you help us speed up the process?"

The Silverson Solution

We recommend using a Silverson high shear In-Line mixer to shorten processing times. Unlike conventional mixers, the In-Line mixer, ideal for larger batches, quickly dissolves the polymers. And the agglomerate-free mix results in a uniform solution, improved product quality and stability.

- Agglomerate-free mix
- Dramatic reduction in mixing time
- Significantly better yield than can be achieved by traditional methods
- Minimised aeration
- Consistent product quality and repeatability

At Silverson we create mixing solutions from a truly unique perspective…yours. Give us a call or visit **www.silverson.com** and we'll solve your mixing problem for you.

mixing inquiry #142

"We are having trouble eliminating lumps when adding thickening agents to our products. Is there a mixer that will solve this problem?"

The Silverson Solution

We recommend using a Silverson high shear In-Line mixer to shorten processing times. Unlike conventional mixers, the In-Line mixer, ideal for larger batches, quickly dissolves gums and thickeners. And the agglomerate-free mix results in a uniform solution, improved product quality and stability.

- Agglomerate-free mix
- Dramatic reduction in mixing time
- Significantly better yield than can be achieved by traditional methods
- Minimised aeration
- Consistent product quality and repeatability

At Silverson we create mixing solutions from a truly unique perspective…yours. Give us a call or visit **www.silverson.com** and we'll solve your mixing problem for you.
